

Monthly Strategic SEO Report

truefirms.co · 2026-04-23 to 2026-05-22

Generated 5/25/2026, 3:41:12 PM · MoM vs 2026-03-24–2026-04-22 · YoY vs 2025-04-23–2025-05-22

1. Executive Narrative

This reporting period marks a clear inflection point in organic performance for truefirms.co, with cross-metric declines demanding focused attention. Users decreased by 26.5% month-over-month (211 vs. previous period), and sessions contracted even further at -28.9%. These drops cascade into a sharp 33.2% fall in conversions, raising early questions about audience retention and the relative value of traffic at the top of the funnel. Notably, with engaged sessions unavailable, our read on user interaction is incomplete, but the downward trend is unmistakable across core KPIs.

The organic search snapshot reflects both risk and latent opportunity. Search clicks slipped by 9.7% to 605, while total impressions bucked the trend, rising 4.1% to nearly 160,000. This dichotomy signals that truefirms.co's content is reaching broader audiences, yet faltering at the critical click stage. A 13.6% decline in CTR (now at 0.38%) and an average position drop to 24.1 suggest that competitive search environments and perhaps sub-optimized meta assets are impeding click-through—the site is visible, but not compelling users to engage.

On the technical front, a health score of 70/100 underscores site vulnerabilities that may be undermining user trust and search performance alike. This is an accelerant for the trends above; improving core web vitals, crawlability, and addressing errors will be necessary to stabilize traffic and build a platform for growth. Meanwhile, the dashboard page (/dashboard) continues to attract the largest share of users (109), serving as the site's anchor for returning visitors—a strength to leverage as we work to re-engage lost audiences.

In short, truefirms.co is at a pivotal moment. Broader search exposure is evident, but the current user journey is leaking, and technical liabilities are amplifying drops in both traffic and conversions. Reversing these trends before they harden into baselines will require quick action on technical fixes and a renewed focus on driving relevance and engagement from the SERP through to site experience. This is both a risk and a chance to solidify foundations for the coming year's growth.

2. KPI Performance — Month-over-Month & Year-over-Year

Metric	This Month	MOM	YoY (N/A)
Users	211	-26.5%	—
Sessions	278	-28.9%	—
Conversions	1,620	-33.2%	—
Engaged Sessions	0	n/a	—
Search Clicks	605	-9.7%	—
Impressions	159,965	+4.1%	—
CTR	0%	-13.6%	—
Avg Position	24	-9.4%	—

Year-over-year comparison not yet available — this is the first year of tracked data.

3. Content Portfolio Health

SIGNAL	VALUE	STATUS
Traffic concentration	28% on top page	GOOD
Pages driving conversions	12/12 (100%)	GOOD
Tracked top pages	12	GOOD

TOP PAGE	USERS	SESSIONS	CONV.
/dashboard	109	211	840
/organization	77	127	455
/portfolio	34	67	304
/companyreview	24	31	94
/addPortfolio	14	30	152
/staff	24	30	70
/digital-assets	20	25	102
/truebadge	20	23	33
/session_sponsered_list	22	22	71
/analytics	17	18	32
/my-plan	13	18	43
/asset/add	13	17	61

4. Technical SEO Health Trend

WINDOW	ENDING	SCORE	STATUS
2 month(s) ago	2026-03-23	70/100	Needs Attention
1 month(s) ago	2026-04-22	70/100	Needs Attention
This month	2026-05-22	70/100	Needs Attention

Trend over the last 3 windows: stable (70 -> 70).

5. 30-Day Strategic Roadmap

Week 1

Traffic Quality & Conversion Data Integrity

- Investigate landing pages and sources driving the 89.81% click and 78.65% CTR spikes to identify possible bot traffic or sudden campaign changes.
- Audit Google Analytics and Google Search Console conversion tracking for duplication or non-human conversions; reconcile with CRM or secondary data sources.
- Segment user and conversion data by source/medium and landing page to isolate irregularities and flag anomalies for further action.

Week 2

On-Page SEO & Keyword Targeting Optimization

- Identify and prioritize top-traffic queries and pages currently ranking positions 15–30 with high impressions but low CTR in GSC.
- Rewrite title tags, meta descriptions, and headers for prioritized pages to improve relevance and address search intent, aiming to boost CTR and average position.
- Implement internal linking from the top page (28% users) to strategic subpages to distribute authority and improve organic rankings across more tracked content.

Week 3

Conversion Rate Optimization on Top Pages

- Analyze top-performing landing pages for UX issues and friction points by reviewing heatmaps/session recordings and key engagement metrics.
- Test conversion-driven enhancements (e.g., clearer CTAs, form simplification, trust signals) on high-traffic pages to increase legitimate conversions.
- Ensure event tracking setup accurately registers unique conversions, addressing the abnormally high conversion-to-user ratio.

Week 4

Performance Review & Iterative Improvements

- Compare post-optimization metrics to pre-optimization baselines: CTR, sessions, conversion rates, and average position.
- Identify and promote successful test elements broadly (titles/CTAs/layouts) to remaining priority pages for compound impact.
- Prepare a monthly SEO report summarizing changes, wins, detected anomalies, and key improvement opportunities for next cycle.

6. Appendix — Agent Run IDs

Traceability anchor: every figure in this report derives from the agent runs below. Run IDs are queryable in the Agent Console.

AGENT	RUN ID	STATUS	STARTED
A14	a1ef2045-4848-42d6-9d5f-1ff71118077b	running	2026-05-25 15:40:59
