Projected users: 221 (+28%)

Projected clicks: 755 (+28%)

+165 additional clicks

^ Trending up

72% CONFIDENCE

Projections based on current CTR improvement potential. Actual results depend on implementation quality and timeline.

2. EXECUTIVE SUMMARY

Traffic has experienced a dramatic decline of 96.26% period-over-period, dropping from 4,624 to just 173 users, which is a critical warning for our performance. Additionally, the click-through rate (CTR) stands at a concerning 0.41%, significantly below the 5% benchmark, indicating an urgent need for optimization of titles and meta descriptions. With 143,149 impressions but such a low CTR, there is a clear opportunity to potentially capture an additional 6,571 clicks through these improvements. Furthermore, conversions have plummeted to zero, representing a 100% decline, which underscores the severity of the situation. Compounding these issues, there is a lack of keyword ranking data, leaving us without insights on keyword trends and distribution. Immediate action is required to address these deficiencies, particularly in optimizing our content and ensuring data quality.

& Risks / Problems

- Traffic declined 96.26% period-over-period (4,624 173 users)
- CTR of 0.41% is significantly below the 5% benchmark titles and meta descriptions need optimization
- 1,43,149 impressions with only 0.41% CTR improving titles/descriptions could capture 6,571 additional clicks
- Conversions declined 100% period-over-period (31,646 0)
- No keyword ranking data available keyword trend and distribution insights are unavailable

Recommendations

- Investigate traffic source decline and diversify acquisition channels.
- Improve on-page titles and meta descriptions to lift CTR.
- 1,43,149 impressions with only 0.41% CTR improving titles/descriptions could capture 6,571 additional clicks
- Audit landing pages and conversion funnels for friction points.
- No keyword ranking data available keyword trend and distribution insights are unavailable

3. KEY INSIGHTS

Opportunities (0)

None identified for this period.

Observations (1)

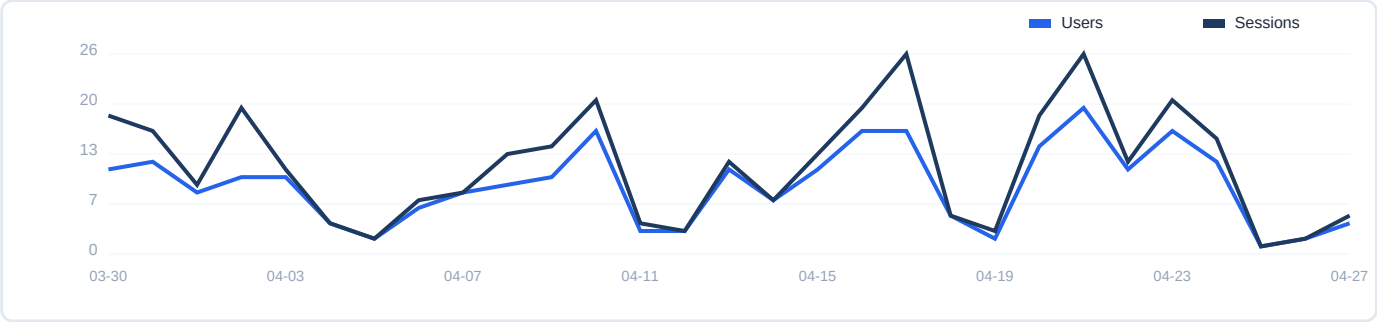

- Backlink data unavailable. Verify DataForSEO and SEMrush API credentials are configured in Settings.
